
WhereScape®

Gesteem Partner

WhereScape helps IT organizations leverage automation to more quickly design, develop, deploy and operate their data infrastructure. Automation accelerated all processes in various industries around the world and there is no doubt that data automation should play a key role in any data infrastructure strategy. Thanks to process automation, users can fully focus on strategy and goals without having to get lost in data unnecessarily. Saving time and effort is another undisputed benefit that you get thanks to which

automation is becoming a common part of performing work tasks, people are learning to work in new ways, better and more efficiently. The use of appropriate procedures and automation will significantly affect the reduction of costs and potential risks of projects.

WhereScape offers several solutions, from WhereScape RED, WhereScape 3D, Data Vault through Teradata and Snowflake automation and Big Data integration, cloud and data warehouse automation. Many customers around the world rely on WhereScape automation to eliminate manual coding, code inconsistencies (removing up to 95% of the manual coding typically required in development), and tedious repetitive data infrastructure operations. The offered solutions guarantee above all speed, reliability and new analytical possibilities in obtaining complex information. All the solutions are suitable for any area in the industry, production, agriculture and banking, just choose a suitable data methodology infrastructure that best suits the project. For example with automated data warehouse design, production time is reduced up to 80%. At the same time, the subsequent data profiling process will be significantly accelerated and data source documentation, in other words, the great advantage of the WhereScape solution is that it automatically creates and updates all documentation with all changes. The data infrastructure reports will therefore always be complete, up-to date and accurate, which will significantly help to achieve the company's vision.

WhereScape works with a community of global partners to offer practical automation solutions that help organizations quickly navigate the delivery of data infrastructure projects and we are excited to be a part of!

“WhereScape automates the design, development and operation of agile data warehouse projects by increasing developer productivity. It uses the MPP Azure SQL DW architecture along with T-SQL”

- Douglas Barnett (Senior Solution architect)
